EXPERIMENT-2

NAME: NITHYA SHREE S

ROLL NO:240701367

Design a UI where users recall visual elements (e.g., icons or text chunks). Evaluate the effect of chunking on user memory.

FRAME 1: INSTRUCTION PAGE

Instruction Page – Chunking Analysis:

This screen introduces the Memory Recall Task and prepares users for the activity using clear and concise instructions.

Chunking Strategy Used:

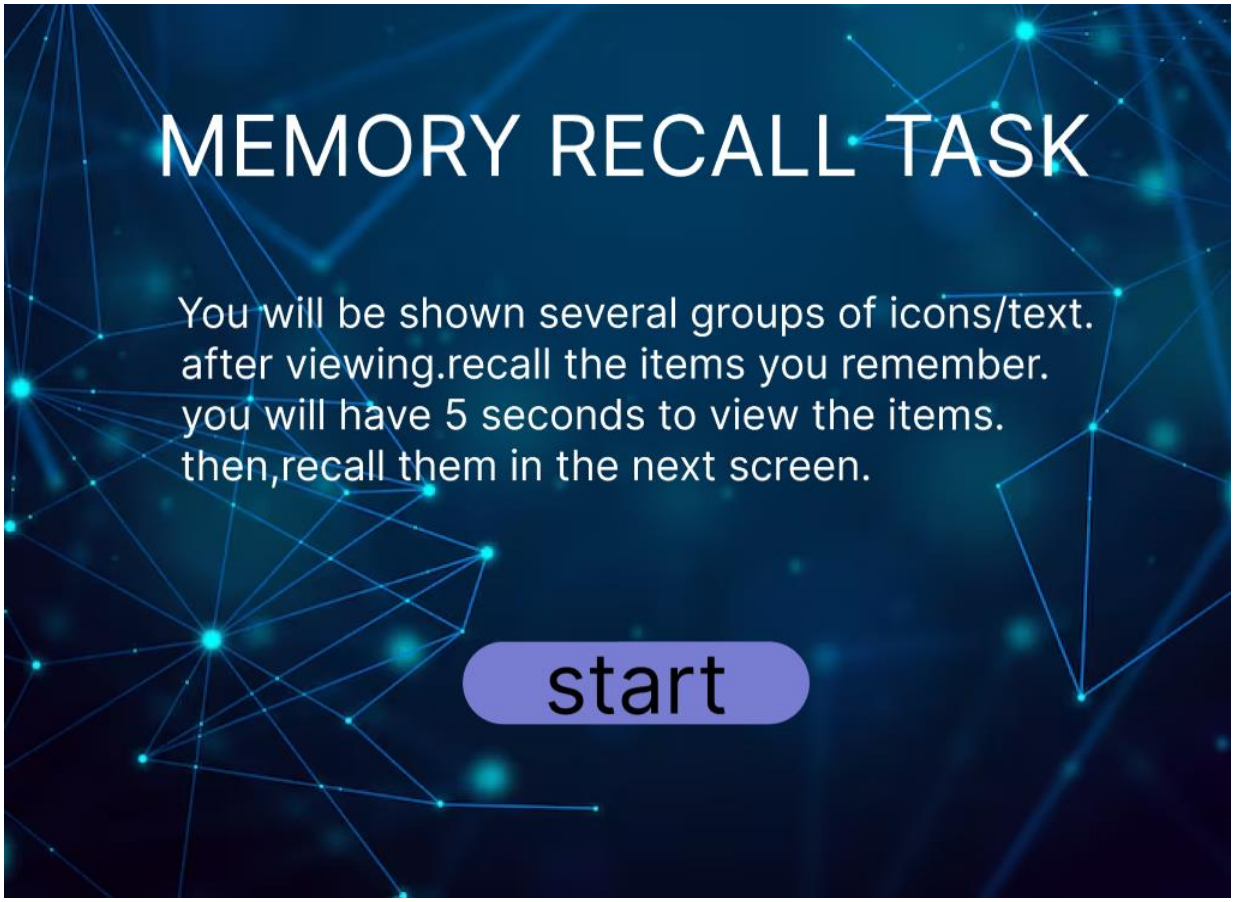
- Instructions are grouped into **short, simple sentences**, reducing cognitive load.
- Information is divided into:
  - **What the user will see**
  - **How long they can view items**
  - **What action to perform next**

UI & UX Elements:

- **Bold title ("MEMORY RECALL TASK")** clearly communicates the task objective.
- Instructions are placed centrally for easy readability.
- The **"START" button** is visually highlighted, guiding users to proceed.
- Minimal text ensures users focus on the task rather than reading.

Cognitive Benefit:

- Chunked instructions help users quickly understand rules.
- Reduces confusion and improves task readiness.



FRAME 2: MEMORY / CHUNKING PHASE

Analysis of the "Remember the Items" Screen:

This screen represents the **encoding phase**, where users observe and memorize visual elements.

Key UI Components:

- **Title: "REMEMBER THE ITEMS"** – clearly indicates the task.

- **Grouped icons**, including:

  - Fruits (apple, orange, mango, strawberry, grapes)
  - Flowers (rose, sunflower, lotus, hibiscus, lily)
  - Vehicles (bus, car, airplane, train, rocket)

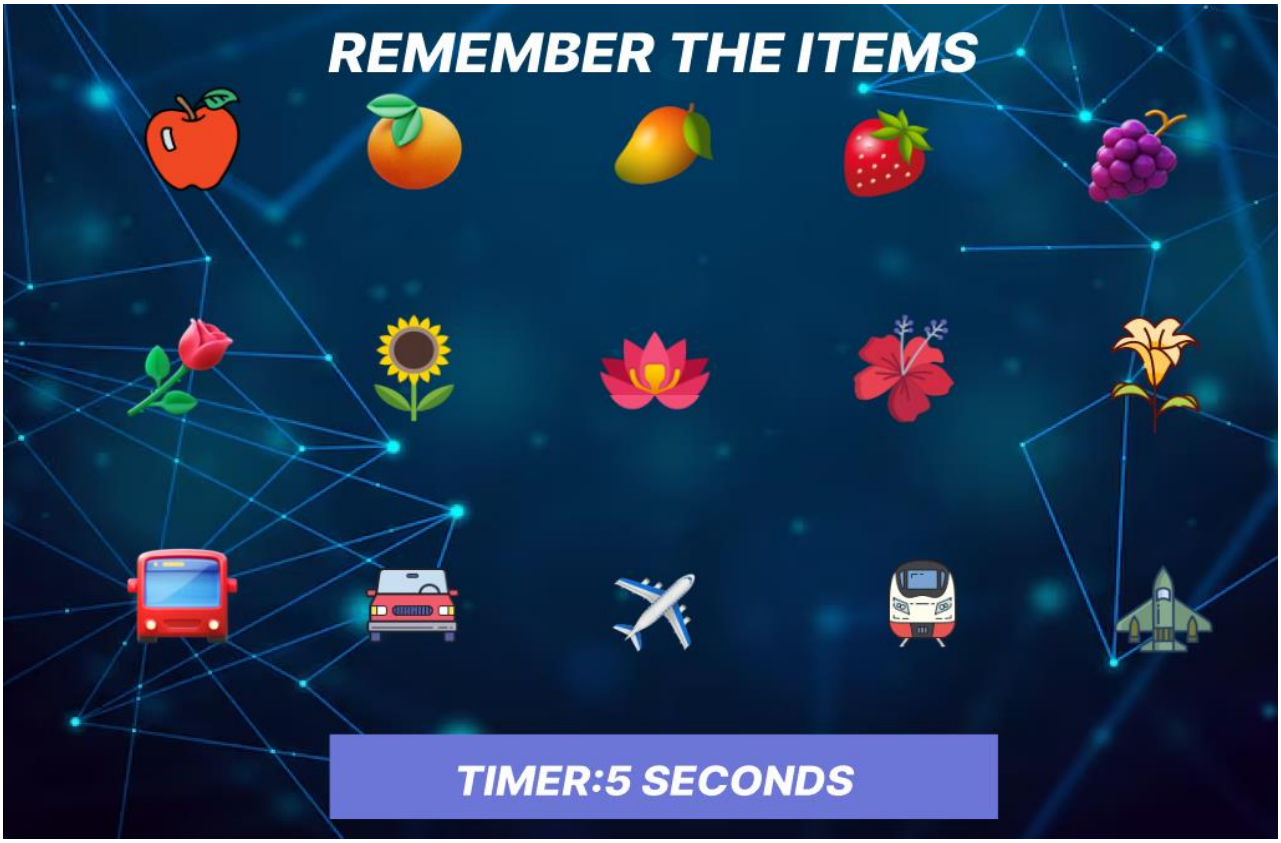
• **Timer: 5 seconds** displayed at the bottom.

Chunking Strategy:

- Icons are **naturally grouped by category**:
  - Fruits
  - Flowers
  - Vehicles
- This allows users to remember items as **groups instead of individual icons**.

Cognitive Benefit:

- Improves short-term memory using **categorization**.
- Time constraint encourages focused attention and quick pattern recognition.



FRAME 3: RECALL PHASE

Analysis of the Recall Input Screen:

This screen tests the user's memory by asking them to recall previously seen items.

UI Components:

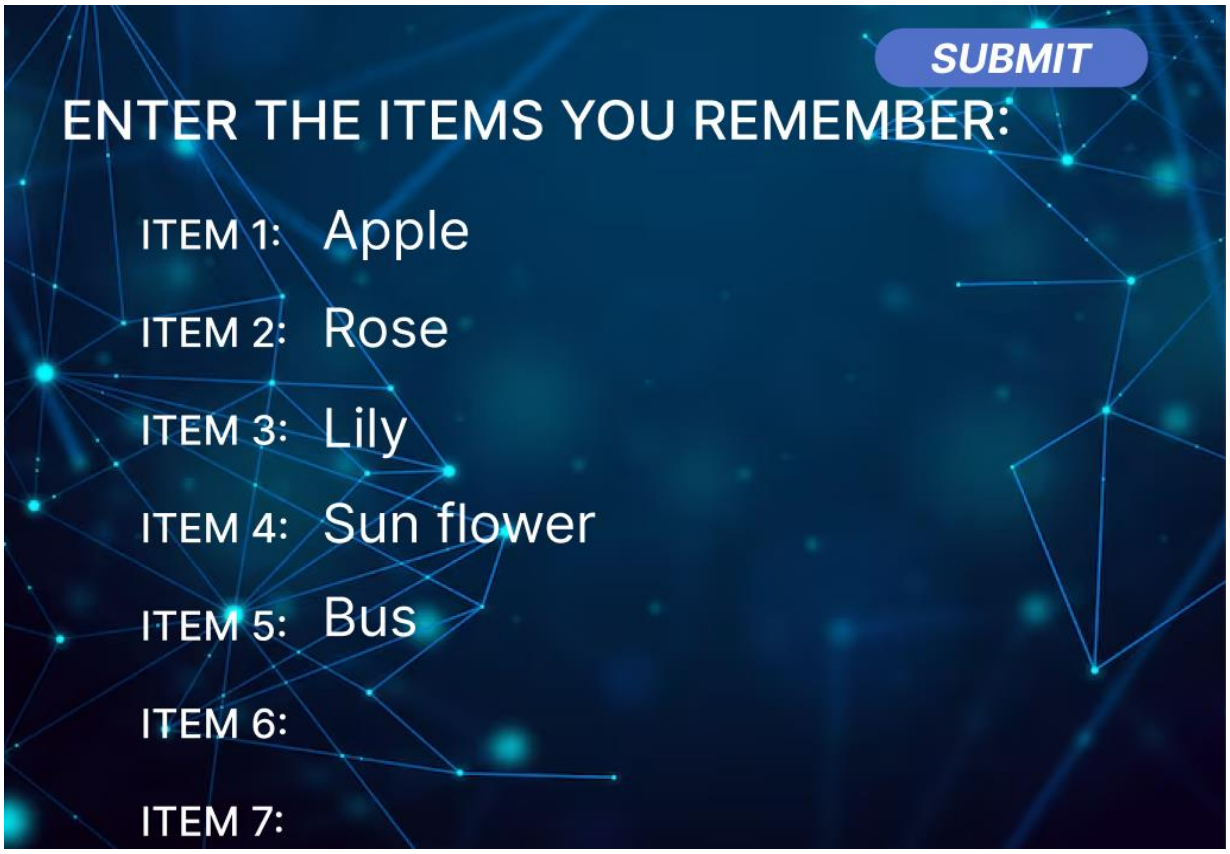
- **Instruction text:** "ENTER THE ITEMS YOU REMEMBER"
- Text fields labelled **Item 1 – Item 7**
- **SUBMIT button** placed clearly at the top

User Interaction:

- Users type the names of items they recall from memory.
- No visual hints are provided, ensuring **pure recall**.

Cognitive Benefit:

- Tests **retrieval memory**, not recognition.
- Encourages users to mentally revisit chunks formed earlier.



FRAME 4: RESULT PAGE

Analysis of the Score & Feedback Screen:

This screen provides feedback based on the user's recall accuracy.

UI Components:

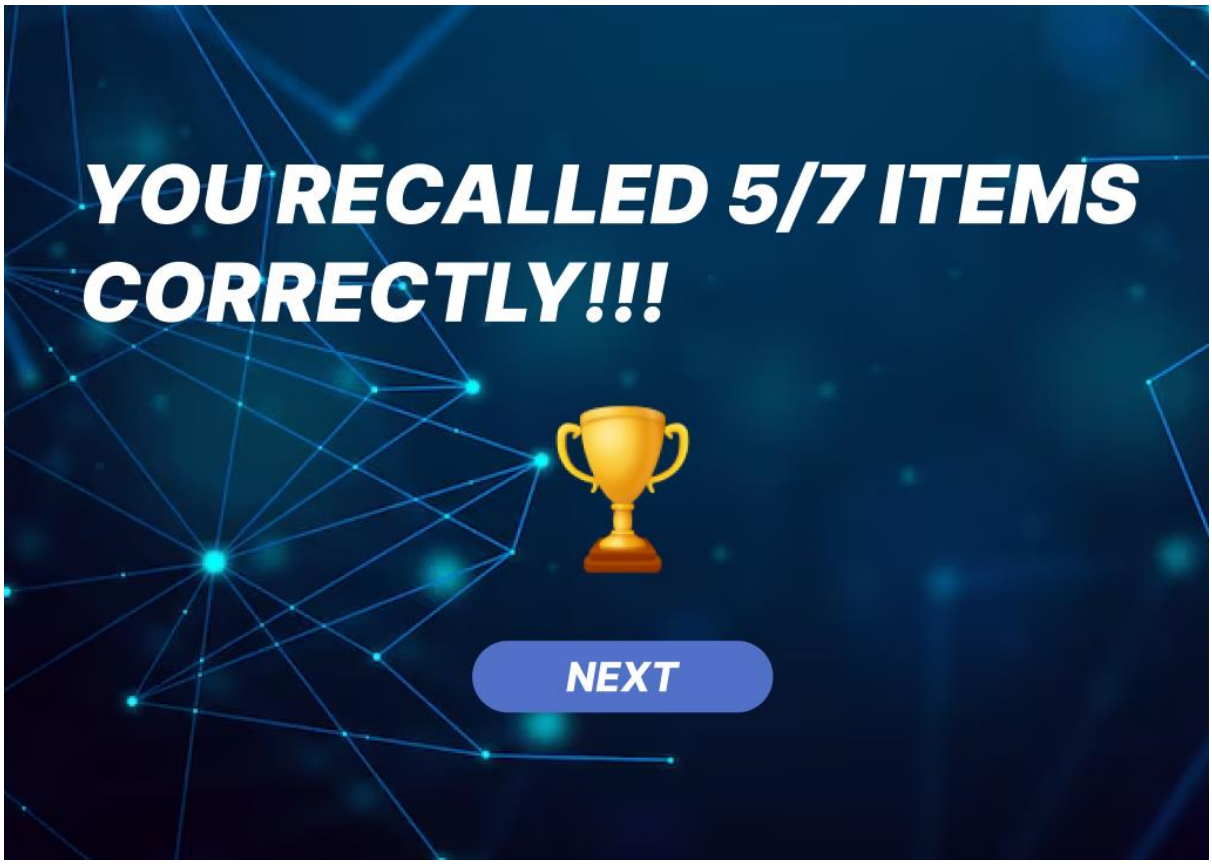
- Result text: **"YOU RECALLED 5/7 ITEMS CORRECTLY!!!"**
- Trophy icon to visually reward performance
- **NEXT button** to continue

Feedback Strategy:

- Score shown as a fraction (5/7) for clarity.
- Positive reinforcement using celebratory text and visuals.

UX & Cognitive Benefit:

- Immediate feedback helps users assess memory performance.
- Motivates continued engagement and improvement.



CONCLUSION:

The Memory Recall Task effectively demonstrates the **chunking principle** by:

- Grouping visual elements meaningfully
- Reducing cognitive overload
- Enhancing memory encoding and retrieval

This UI design successfully balances **usability, cognitive psychology, and engagement**.

THANK YOU!!!
