ROLL NO:240701367

UI Design Using RAD Model for Bus Booking Application Prototype

AIM:

To demonstrate the lifecycle stages of User Interface (UI) design using the Rapid Application Development (RAD) model and to develop an interactive prototype for a **Bus Booking Application**.

INTRODUCTION:

The Bus Booking Application is designed to simplify the process of booking bus tickets online. It provides a user-friendly interface for searching buses, selecting seats, and making payments. The project follows the Rapid Application Development (RAD) model for quick and efficient design. Various UI stages like planning, wireframing, and prototyping are implemented using Axure RP. The system ensures a smooth and convenient booking experience for users. Overall, it demonstrates a complete and interactive bus booking workflow.

PHASE 1: Requirements Planning

In this stage, the main functional requirements for the Bus Booking App were identified to ensure a smooth booking experience.

User Goals:

- Easy source and destination selection
- Bus search and seat availability

- Transparent pricing and booking

Key Features Identified:

- **Source & Destination Entry:** Input fields for boarding and drop locations
- **Date Selection:** Travel date picker
- **Bus Listing:** Display buses with timing, type (AC/Non-AC), and price
- **Seat Selection:** Visual seat layout for choosing seats
- **Passenger Details:** Enter name, age, and contact details
- **Payment Integration:** Options like UPI, Card, Net Banking
- **Booking History:** View past bookings

PHASE 2: User Design (Wireframing & Prototyping)

Using Axure RP, the requirements were converted into visual screens.

1. Wireframe Creation:

- **Home Screen:**
Contains fields for "From", "To", "Date", and a "Search Buses" button
- **Bus List Screen:**
Shows available buses with:
 - Bus name
 - Departure & arrival time
 - Price
- **Seat Selection Screen:**
Displays seat layout with available and booked seats
- **Passenger Details Screen:**
Form to enter passenger information

2. Adding Interactions:

- **OnClick Events:**
"Search Buses" → Bus List screen
- **Navigation:**
Back buttons for smooth navigation
- **State Changes:**
"Confirm Booking" → Booking success message
-

3. Masters & Reusable Elements:

- Header created as "**Bus Booking App**" for all screens
- Consistent buttons and layout used across pages

PHASE 3: Construction

This phase converts wireframes into an interactive prototype.

Interactive Elements:

- **Dynamic Panels:**
Used for loading bus results and booking confirmation
- **Seat Selection Logic:**
Clickable seats to select/deselect
- **Radio Buttons:**
Used for payment selection (UPI/Card/Net Banking)

Iterative Testing:

- Prototype tested using Axure preview
- Booking flow tested from:
 - Selecting route
 - Choosing bus
 - Seat booking
- UI improvements made (button size, readability)

PHASE 4: Cutover

Final stage focuses on preparing the design for deployment.

1. Final Export:

- Project published on Axure Cloud
- Shareable prototype link generated

2. User Documentation:

- Guide explaining flow from:
 - Search Buses → Seat Selection → Payment → Booking Confirmation

3. Final UI Specification:

- **Primary Color:** Blue (#1E90FF)
- **Typography:**
 - Headers: Serif
 - Body: Sans-serif

RESULT:

The Bus Booking Application prototype was successfully developed using Axure RP. The RAD model enabled fast development and continuous improvements, resulting in a user-friendly interface that covers the complete bus ticket booking process.

You're generating images too quickly. To ensure the best experience for everyone, we have rate limits in place. Please wait for an hour before generating more images.

Bus booking passenger details screen

6th image

I can't generate the 6th image right now due to the rate limit, but I'll give you the **exact design content** so you can easily create it (or I can generate it for you after some time 🙌).

✔ 6th Image – Booking Confirmation Screen (Color UI)

Design Details:

- **Background:** Light green or gradient (green → white)
- **Top Icon:** Big ✔ checkmark inside a green circle
- **Title:**
📄 *Booking Successful!* (bold, dark green)
- **Message Text:**
📄 *Your bus ticket has been booked successfully.*
- **Details Section (optional box):**
 - Bus Name: Sharma Travels
 - From: Chennai
 - To: Bangalore
 - Date: 25 March
 - Seat No: A1
- **Button (Primary):**
 - Text: **View Ticket**
 - Color: Dark green / blue
- **Optional Button:**
 - **Download Ticket** or **Go to Home**

🌀 Simple Layout Structure

```
      ✔ (Green Circle)

      Booking Successful!

      Your ticket has been booked!

      -----
      Bus: Sharma Travels
      From: Chennai
      To: Bangalore
      Seat: A1
      -----

      [ View Ticket ]
      [ Download Ticket ]
```

I WANT INTRODUCTION FOR THIS

Here is a **simple and clean INTRODUCTION** for your **Bus Booking System UI Design (RAD Model project)** 🖱

INTRODUCTION

The Bus Booking Application is designed to provide users with a simple, fast, and convenient way to book bus tickets online. With the increasing use of digital platforms, passengers prefer booking tickets through mobile or web applications instead of visiting ticket counters.

This project focuses on designing a user-friendly interface for a Bus Booking System using the **Rapid Application Development (RAD) model**. The system allows users to search for buses, select seats, enter passenger details, and make payments easily through an interactive interface.

The main objective of this application is to enhance user experience by providing a smooth and efficient booking process. The interface is designed with clear navigation, attractive layouts, and responsive elements to ensure ease of use for all types of users.

Using tools like Axure RP, the application prototype demonstrates different stages of UI design including requirement planning, wireframing, prototyping, and testing. The final design ensures a seamless journey from searching buses to confirming bookings.

ABSTRACT

Here is a clear and simple **ABSTRACT** for your **Bus Booking System UI Design Project** 🖱

ABSTRACT

The Bus Booking Application is developed to simplify and digitize the process of booking bus tickets. This project demonstrates the design and development of a user-friendly interface using the Rapid Application Development (RAD) model. The system enables users to search for available buses, select seats, enter passenger details, and complete payments through an intuitive and interactive platform.

The application focuses on enhancing user experience by providing a smooth and efficient booking flow with minimal complexity. Various UI design stages such as requirement planning, wireframing, prototyping, and testing are implemented using Axure RP. The prototype includes essential features like route selection, bus listing, seat selection, and booking confirmation.

The RAD model allows quick development and continuous improvements based on user feedback, ensuring a flexible and effective design process. The final outcome is a functional prototype that demonstrates the complete lifecycle of a bus booking system with a focus on usability, accessibility, and efficiency.
