

EXPERIMENT 9

NAME: NITHYA SHREE S

ROLL NO:240701367

AIM:

To design an input form that validates user data such as email and phone number and displays appropriate error messages using **HTML, CSS, and JavaScript**.

PROCEDURE:

Step 1: Setting Up the HTML Form

Create an HTML form with input fields for:

- Email address
- Phone number
- Submit button

Also include a space to display error messages.

Step 2: Styling the Form using CSS

Apply basic styling to improve the appearance of the form:

- Add spacing between inputs
- Style the button
- Improve font and layout

Step 3: Adding JavaScript for Validation

Write JavaScript code to:

- Check if email contains "@"
- Validate phone number length (10 digits)
- Ensure phone number is numeric
- Display error messages if inputs are invalid

- Show success alert if all inputs are correct

SCREENSHOT:

```
index.html > html > body > script > addEventListener("submit") callback
1  <!DOCTYPE html>
2  <html>
3  <head>
4    <title>Form Validation</title>
5  </head>
6  <body>
7
8    <form id="myForm">
9      <input type="text" id="email" placeholder="Enter Email"><br>
10     <input type="text" id="phone" placeholder="Enter Phone"><br>
11     <button type="submit">Submit</button>
12     <p id="error"></p>
13   </form>
14
15   <script>
16     document.getElementById("myForm").addEventListener("submit", function(e) {
17       e.preventDefault();
18
19       let email = document.getElementById("email").value;
20       let phone = document.getElementById("phone").value;
21       let error = "";
22
23       if (!email.includes("@")) {
24         error += "Invalid Email\n";
25       }
26
27       if (phone.length != 10 || isNaN(phone)) {
28         error += "Invalid Phone Number";
29       }
30
31       document.getElementById("error").innerText = error;
32
33       if (error === "") {
34         alert("Form submitted successfully!");
35       }
36     });
37   </script>
```

OUTPUT:

1. For Invalid Email and Phone Number:

- Displays:
 - *Invalid Email*
 - *Invalid Phone Number*

A screenshot of a web form with two input fields. The first field contains 'nithyagmail.com' and the second contains '979133'. Below the fields is a 'Submit' button. Underneath the form, the text 'Invalid Email' and 'Invalid Phone Number' is displayed, indicating that the inputs do not match the required validation rules.

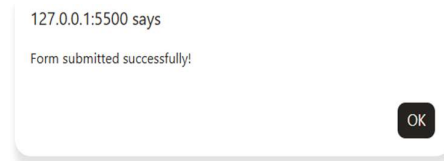

Invalid Email
Invalid Phone Number

2. For Valid Email and Phone Number:

- Displays alert:
 - **"Form submitted successfully!"**

A screenshot of a web form with two input fields. The first field contains 'nithya@gmail.com' and the second contains '9791338631'. Below the fields is a 'Submit' button. The inputs are valid according to the validation rules.

RESULT:

Thus, the form validation was successfully implemented using HTML, CSS, and JavaScript, and appropriate error messages were displayed for invalid inputs.
